

HPV CANCER PREVENTION

THERE'S A VACCINE FOR CANCER

IS YOUR CHILD PROTECTED?

HUMAN PAPILLOMAVIRUS (HPV) IS A VERY COMMON VIRUS

Nearly half of Americans between the ages of 18-59 are infected in the United States.

HPV VACCINE IS CANCER PREVENTION

HPV infection can cause anal, cervical, penile, throat/tonsil, vaginal, and vulvar cancers.

HPV VACCINE WORKS BEST WHEN ADMINISTERED AT AGES 11-12

The vaccine produces better immunity to fight infection when given at a younger age.

Recommended vaccines for adolescents age 11 or 12 include:

- ✓ TDAP
- ✓ HPV
- ✓ MENINGOCOCCAL

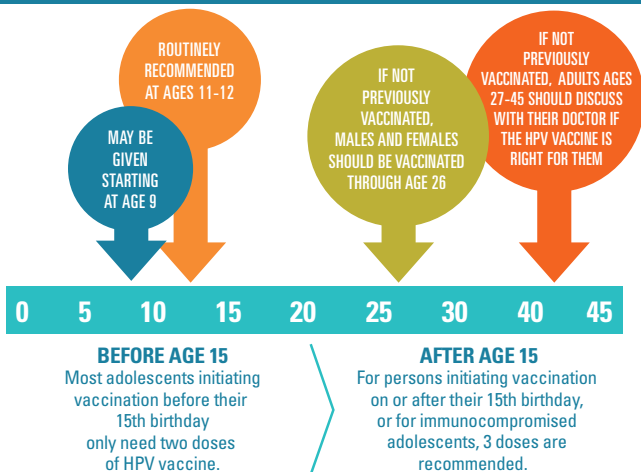

RECOMMENDED AT THE SAME TIME AS OTHER ADOLESCENT VACCINES

HPV VACCINE IS SAFE AND EFFECTIVE

HPV vaccine is safe, effective, and recommended by the Centers for Disease Control and Prevention (CDC).

HPV VACCINATION RECOMMENDATIONS

AGE	RECOMMENDED NUMBER OF DOSES	SCHEDULE
9 through 14 years	2 – dose*	0, 6 – 12 months
15 through 26 years	3 – dose	0, 2, 6 months
27 through 45 years**	3 – dose	0, 2, 6 months

* Discuss with your doctor, as three doses may still be recommended for some adolescents. **Shared clinical decision-making is recommended for individuals aged 27-45. Ask your doctor if HPV vaccination is appropriate for you.

NEED HELP PAYING FOR THE HPV VACCINE SERIES?

The HPV vaccine is available to eligible adolescents through the Vaccines for Children Program in South Dakota. To learn more about the VFC program visit: <https://doh.sd.gov/family/childhood/immunization/>

To learn more about the HPV virus and HPV vaccine visit: www.cdc.gov/hpv

1,500 copies of this document have been printed on recycled paper by the South Dakota Dept. of Health at a cost of \$0.67 each, funded 100% through the Centers for Disease Control and Prevention (CDC), cooperative agreement number DP006293. Rev 6/2020
